

Five cybersecurity trends you need to know

Cyberthreats are more dangerous than ever before

1.

A rise in the sophistication of cyberattacks has made it hard to detect malicious emails

156K

The number of daily business email compromise (BEC) attempts observed by Microsoft from 2022–2023
2.

An expanded identity landscape has expanded opportunities for cyberattacks

4K

The number of identity authentication threats blocked per minute by Microsoft Security
3.

Hybrid environments and shadow IT have increased endpoint blind spots

78%

Percentage of devices on customer networks that have known vulnerabilities that threat actors can exploit
4.

More tools are leading to more incidents

61%

Percentage of surveyed businesses that have been impacted by supply chain attacks in the past year
5.

Protecting the cloud is critical, but complex

80–90%

Percentage of successful ransomware compromises that originated through unmanaged devices

As a Microsoft Partner we offer...

Comprehensive security management that covers your infrastructure environment—identities, endpoints, data, email, cloud apps, and infrastructure. Our advanced tools and technologies help us monitor and mitigate risks, ensuring minimal impact on your business operations. Our managed services simplify integration of services and migration of security solutions.

of cyberattacks could be prevented with basic security hygiene

You’re only as strong as your weakest link.

We’re here to make sure you don’t have any.
